

Gabriel Fernandez

Full-Stack Developer

I am a recent graduate of Coding Dojo Bootcamp, currently open to new positions. I have years of work experience, two in a technical role for major tech companies. I am an agile learner that can pick up new technologies. I am eager to integrate my work experience and my new set of skills.

EXPERIENCE

Apple (via Apex Systems)— GIS Researcher, Mar 2019 - Mar 2020

- Conducted web research and tracked upcoming construction projects and traffic/pedestrian related changes + Analyzed aerial imagery + Contacted government and other sources for map updates.
- Improved workflow and streamlined work processes through regular feedback and consistent updates to project leaders and management.
- Maintain multiple projects of different priorities across multiple timelines to update Project Coordinators and our mapping team.

Oracle — Tax Operations Intern, Jan 2018 - Oct 2018

- Leveraged knowledge of Oracle's Business Intelligence tools to dissect the department's performance to guide leadership and improve strategic organizational growth process.
- Supported Oracle's tax planning, treasury planning, PMO, income tax compliance, withholding tax compliance, and non-income tax compliance teams with source to settle services.
- Processed service requests and coordinated with teams globally to control payments and ensure rendering of services were delivered and paid on time.

Mondelez International, Inc.— Associate, Jun 2017 - Jan 2018

- Ensured tactical and strategic success of store deliveries by facilitating the management of logistical work between drivers and client stores.

PROJECTS

Blogger — [Repo](#) | [Website](#) 2020

A blog post app where users can post blogs about certain subjects. Users have full CRUD functionality on their posts. Users can leave comments on posts. App also includes Admin functionality.

- Implemented user login/reg with Django Auth User and Django admin.
- Utilized Class-Based Views & reusable apps.
- Tech: Django, MySQL, Bootstrap, Crispy Forms, Pillow, FontAwesome, & Recaptcha.
- Deployed on AWS EC2, utilizing Nginx & Unicorn.

My Shop — [Repo](#) | [Website](#) 2020

An eCommerce application where customers can search and purchase items. The admin can also manage customers' orders and products.

- Built application end-to-end using MERN stack.
- Implemented user login/registration.
- Implemented PayPal so customers can pay safely.
- Tech: React, Redux, MongoDB Atlas, Mongoose, Express, Node, BCrypt, JSONWebToken, Bootstrap, & PayPal.
- Deployed on Heroku

MovieDB API — [Repo](#) | [Website](#) 2020

Users can search for movies by utilizing the MovieDB API. The detail page displays key details about the movie.

- Retrieved data from MovieDB API.
- Tech: React, Redux, Axios, Framer Motion, Styled Components.
- Deployed on Firebase.
